A Very Informal MP PROPOSAL

Adi
M.A Web Design & Content Planning

So, the thing is

India is Vast

Evidently & probably not a
breaking news.

Oh, what a surprise.

But, how to scale this
vastness?

And now,

Adi will explain the problem with

1. Planning to visit India as a non-Indian
2. Planning to visit India as an Indian (yes)

How do you make an itinerary?

Will you,

Follow a pre-made plan provided by thousands of travel websites with a bad UX, and Wikipedia content? (also inaccessible)

OR

Take things into your own hands and handpick your trip with an easy and intuitive guide to tour India; unlock places less travelled, in-depth guide to everything out there to explore.

And now,

Adi explains the approach to solving the problem

Points

1. Map of India
2. Little known facts sprinkled in
3. UI and UX – Ultimate Priority (Colours, especially) Representing flavours and cultures
4. An easier, more accessible window to India

Why I back this idea?

Points

1. What do I bring to the table?
2. The scalability and target - expansive
3. A new approach, and the passion

Future

A lot of ideas that I am going to talk about, now~

A scenic landscape featuring a calm lake in the foreground, surrounded by dense evergreen forests. In the background, rugged mountains rise against a clear blue sky. A small, simple cabin is nestled among the trees on the far shore. The entire scene is overlaid with a semi-transparent blue and green gradient.

THANK YOU!

Open to Questions, Suggestions, and more!

& then we can move to my backup plan
